Filed : September 26, 2000

AMENDMENTS TO THE CLAIMS

Please amend the claims as follows:

1. Cancelled

2. (Currently Amended) ~~A system as in claim 1,~~ A system, comprising:
a television remote which has first buttons controlling at least a plurality of
functions on a controlled television which is separate from said television remote, said
television remote mounted in a housing, which housing is totally separate from the
television being controlled by the remote, and said television remote also having a
command which accesses information from a hyperlink that is associated with a
television program that is being currently displayed on a display of the television,
wherein said remote communicates with a separate computer, to display said
information from said hyperlink on a display of the separate computer, and where said
display of said separate computer is totally separate from the display of the television.

3. (Original) A system as in claim 2, wherein said television remote
transmits a command that causes said information to be displayed at a next startup of a
process on said separate computer.

4. (Original) A system as in claim 2, wherein said information is added to
a list of internet favorites on said separate computer.

5. Cancelled

Appl. No. : 09/669,959
Filed : September 26, 2000

6. (Currently Amended) A system as in claim ~~4~~2, wherein said requested information displays said information from said hyperlink on a personal computer.

7. (Currently Amended) A system as in claim ~~4~~2, wherein said command that accesses information causes an email to be sent to said user.

8. (Currently Amended) A system as in claim ~~4~~2, wherein said hyperlink includes an indication of a referring source.

9. (Currently Amended) A system as in claim ~~4~~2, wherein said command that accesses information comprises making a purchase of an item that is displayed on the television.

10. (Currently Amended) A system as in claim ~~4~~2, wherein said remote includes a separate receiver which receives hyperlinks that are associated with a program that is currently being displayed on the television.

11. (Original) A method, comprising:
producing, on first entertainment media, an address of
an internet site which includes an indication of the source that produce the address;
using said address to access the internet site; and

Appl. No. : 09/669,959
Filed : September 26, 2000

at said internet site, determining said source, from said address.

12. (Original) A method as in claim 11 further comprising keeping track of a number of times the internet site is accessed from said source, and entering a billing arrangement in which an advertising is billed based at least partly on said determining and on a number of times that the advertising causes said address to be accessed.

13. (Original) A method as in claim 12 wherein said billing includes counting a number of hits from the specified origin, and paying an amount which is related to said number of hits.

14-16. Cancelled

17. (Original) A system, comprising:
a user interface, associated with an entertainment media, which enables entering a command that indicates interest in an address to an internet site associated with a currently-displayed program on the entertainment media; and
an internet address handling element, sending a message to another device, separate from said user interface, said message including information about said address.

Appl. No. : **09/669,959**
Filed : **September 26, 2000**

18. (Original) A system as in claim 17, wherein said handling element is an e-mail sending program which sends an e-mail to an address associated with said entering said command.

19. (Original) A system as in claim 17, wherein said handling element is a short range communicator which sends information to a computer that is separate from said user interface.

20. (Original) A system as in claim 19, wherein said short range communicator is Bluetooth™.

21. (Currently Amended) A method, comprising:
using a remote control device for an entertainment media at a first time to control television-displayed programming content that is being delivered by said entertainment media, said remote mounted in a housing, which housing is totally separate from a housing of the entertainment media being controlled; and
using said remote control device at a second time, to indicate that access is desired to information associated with a hyperlink that is associated with a television program that is being carried on the entertainment media, and sending information indicative of the hyperlink to a separate computer, which separate computer has a separate display from said television.
